

Piyush Kumar

Backend Software Engineer

piyushpandiit@gmail.com | +91 90272 88186 | linkedin.com/in/piyush-kumaar

Summary

Backend Software Engineer with 4+ years building distributed systems, microservices, and cloud-native platforms at scale. Deep experience in Java/Spring Boot backend architecture, AWS (EKS, Lambda, DynamoDB) and Kubernetes, with a track record of cutting system latency, scaling microservices migrations and driving 99.9%+ production uptime. Skilled in REST API and event-driven system design, with hands-on delivery across distributed teams.

Work Experience

Schneider Electric

Bengaluru, Karnataka

Senior Integration Engineer

Mar'24 – Present

- Reduced end-to-end system latency by 35% by profiling and re-architecting middleware algorithms across distributed microservices handling real-time IoT data pipelines.
- Cut post-release defects by 45% by designing and implementing an integration testing framework that simulated cross-service failure scenarios across the backend architecture.
- Improved platform scalability by 30% by leading the end-to-end migration of 20+ containerized microservices from RKE to Amazon EKS, enabling zero-downtime production deployments.
- Achieved 99.9%+ uptime by conducting structured Root Cause Analysis on high-severity production incidents and strengthening observability tooling (CloudWatch, Grafana, Logz.io) across distributed services.
- Exposed RESTful APIs consumed by internal dashboards by designing backend service contracts that gave cross-functional teams real-time visibility into microservice health and deployment status.

Bitxia Tech

Gurgaon, Haryana

Software Engineer

Oct'23 – Feb'24

- Reduced user drop-off by 40% on multi-step onboarding flows by redesigning backend data persistence with a step-save architecture that improved transactional consistency.
- Cut manual KYC processing time by 20% by integrating external financial APIs (CDSL) to automate real-time verification and onboarding.
- Reduced cross-team coordination overhead by authoring API contracts and technical documentation that accelerated integration for downstream consumers.

Nagarro

Gurgaon, Haryana

Associate Software Engineer

Mar'22 – Oct'23

- Purged millions of records with 100% data consistency by designing a multi-threaded DynamoDB cleanup utility using parallel segmentation and concurrency control.
- Achieved 90%+ code coverage by building comprehensive unit and integration test suites (Jest, mocking strategies) validating backend service integrations.

The Tann Mann Gaadi

Bengaluru, Karnataka

Software Engineer Intern

Jun'21 – Sep'21

- Reduced UI load time for large datasets to under 5 seconds by optimizing SQL queries powering booking views.
- Cut support tickets related to order-state confusion by building a real-time order tracking status indicator.

Skills

Backend & Runtime: Java, Spring Boot, Node.js, Python, SQL, GraphQL, Hibernate, JUnit, Jest

Cloud & DevOps: AWS (Lambda, S3, DynamoDB, EKS), Kubernetes (EKS / RKE), Docker, Jenkins, GitHub Actions, Maven

Systems & Architecture: Distributed Systems, Microservices Architecture, Event-Driven Design, Confluent Kafka, System Design, CI/CD

Observability & Tools: Grafana, Logz.io, CloudWatch, Jira, Confluence, Integration Testing

Frontend: Angular, React, JavaScript (ES6+), HTML5, CSS3, RxJS, Component Architecture

Projects

Microservices Regression Testing Automation – Kubernetes Upgrade Validation

- Built an automated regression testing pipeline to validate microservices post-Kubernetes upgrades, preventing production regressions across cluster changes.

J.P. Morgan Chase & Co. – Software Engineering Job Simulation (Forge)

Jan'26 – Feb'26

- Integrated Kafka into a Spring Boot microservice to consume and deserialize high-volume transaction messages, with transaction validation via Spring Data JPA, H2, and an external REST Incentive API.

Education

University Institute of Engineering and Technology, Kanpur

2018 – 2022

B.Tech, Information Technology
